Equipment

First Quality Restoration offers the latest in drying equipment and technical knowledge to ensure faster drying.

Upon arrival psychrometric readings are taken to determine the moisture content of the air. Non-penetration and penetration meters are also used to check wall cavities, flooring, and sub-floor moisture content.

These are done daily until dry out is complete and documented for the customer and/or insurance agency.

866-273-8684

Summary

- Turbo blowers, vane axial fans, and vortex fans
- Dri-eaz 80`s, 1200`s, LGR 2000`s, LGR 2400`s, 300 desiccants, and Phoenix 200 max dehumidifiers
